

Xeta2 Series 217-222 MHz 10 – 800 kbps

Licensed Software Defined Radio

The **Xeta2** series is built around a licensed 217-222 MHz software defined radio that features dynamic modulation, flexible configuration options and multi-layer Ethernet capabilities including VLAN and Routing.

The **Xeta2** selectively switches modulation based on link quality and environmental noise. This dynamic modulation allows for RF data rates from 10 kbps – 800 kbps using 12.5 – 500 kHz channel sizes and power output from 10 – 5000 mW (10 – 37 dBm).

With built-in support for **MultiSpeed Multipoint™** the **Xeta2** enables both high and low speed remotes to operate on the same network with a single Access Point.

This new capability allows for unparalleled flexibility in network design. Remotes with shorter links can operate at faster data rates, maximizing system performance, while remotes with longer or more challenging links can operate at slower data rates, maximizing system flexibility.

Lastly, based on its patent pending **Dual Decode Digital Architecture™**, XetaWave's technology platform offers performance second to none in the commercial market today.

Technology Differentiators

FCC Part 80 & Part 90 Operation 217-222 MHz.

High Speed 10 – 800 kbps over-the-air RF data rates.

Dual Radio Support for optional 2nd RF Module (of any Xeta Series) in a single enclosure provides enhanced repeater functionality, higher throughput rates and multi-band/multi-frequency operations.

Link Adaptation Dynamic data rate automatically adapts communication parameters to achieve optimal link performance.

Multi-Speed Multi-point Unique to XetaWave, a *single* radio can have multi-logical data channels with different speeds, providing configuration and installation flexibility where long range or high speed can be prioritized.

Ethernet Switch The **Xeta2** acts like a switch, making more efficient use of RF bandwidth when compared to other "bridge" products. Two independent Ethernet ports and up to two RF Modules, each with full VLAN support, allow multiple logical networks to exist within the same physical system.

IP Routing Layer 3 Routing provides improved Ethernet traffic management for slower narrowband links, making the most efficient use of RF link bandwidth.

Seamless Serial integration for hybrid networks utilizing both Ethernet and Serial devices.

Configuration Management HTTP/HTTPS Web UI, text based configuration files and CLI (accessed via serial interface or SSH).

Onboard Diagnostics Built in diagnostic support with tools such as Neighbor List, RF Ping, RF Throughput and RF Statistics.

SNMP V1/V2, V3 support for network management.

5 Watts Adjustable power output from 10 mW – 5 W (10 – 37 dBm)
