

XetaEdge9

Industrial Edge Computer with 900 MHz ISM/MAS Radio

The **XetaEdge9** combines the **XetaEdge** and **Xeta9** to provide an extremely capable and flexible industrial Edge Computing application device with an integrated Frequency Hopping Spread Spectrum (FHSS) and Digital Transmission System (DTS) software defined radio supporting the unlicensed or both the licensed and unlicensed 900 MHz frequency bands. Based on the Debian operating system, the **XetaEdge9** radios are XetaWave's latest generation of radios.

The **XetaEdge9** is 100% open source allowing quick and simple hosting of many existing or new applications including the **eACM** and the **Ignition Edge** for interacting with existing devices like flow meters, ROCs, and PLCs.

The **XetaEdge9** also supports multiple modulation schemes and **MultiSpeed** mode which allows Endpoints operating at different RF data rates to communicate with a single Access Point to achieve optimal data throughput given the available channel size and RF environment.

All **Xeta9** radios from the XetaWave uTasker, Linux, Debian, and XetaEdge families are over-the-air compatible. The **XetaEdge9** radios support **compatibility** with the **MDS 9710/9790**, **SD9**, **TransNet™**, and **TransNext™** master radios and the **XetaEdge9x9** radio also supports full duplex operation.
